```

GAOL

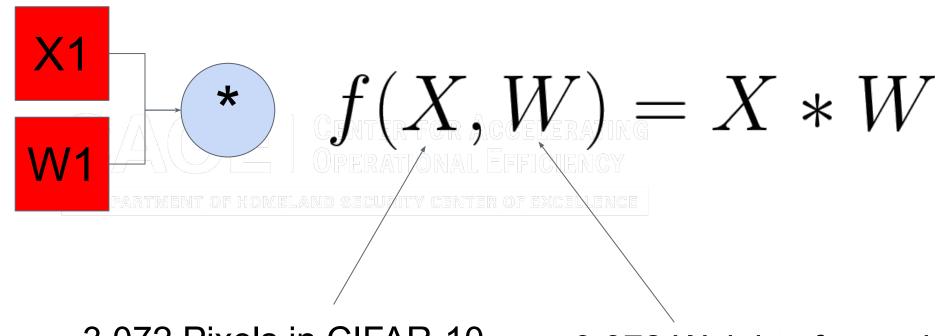

```
class MultiplicationNode():
    def forwardPass(input1,input2):
        output = input1 * input2
        return output
    def backwardPass(dOutput):
        dInput1 = input2 * dOutput
        dInput2 = ...
        return [dInput1, dInput2]
```

A DEPARTMENT OF H

```
class MultiplicationNode():
    def forwardPass(input1,input2):
        output = input1 * input2
        self.input1 = input1
        self.input2 = input2
        return output
    def backwardPass(dOutput):
        dInput1 = self.input2 * dOutput
        dInput2 = self.input1 * dOutput
        return [dInput1, dInput2]
```

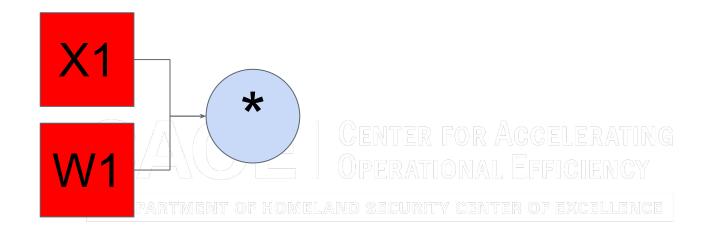

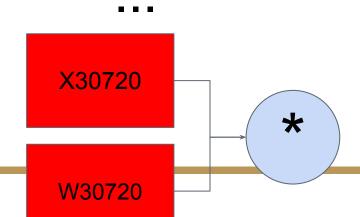

3,072 Pixels in CIFAR-10 (32x32x3 colors)

3,072 Weights for each of 10 classes.

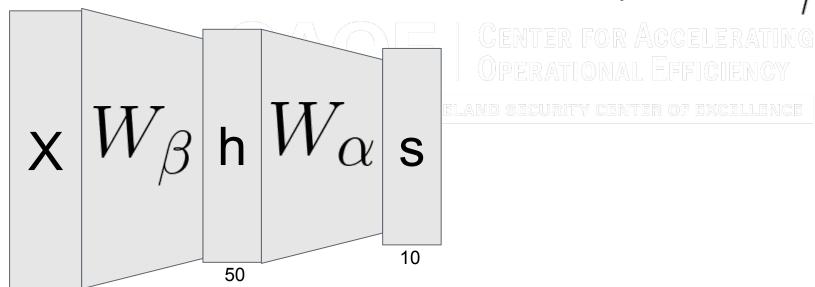

$$f(X, W) = X * W$$

 $f = W_{\alpha} * max(0, W_{\beta} * X)$

3072

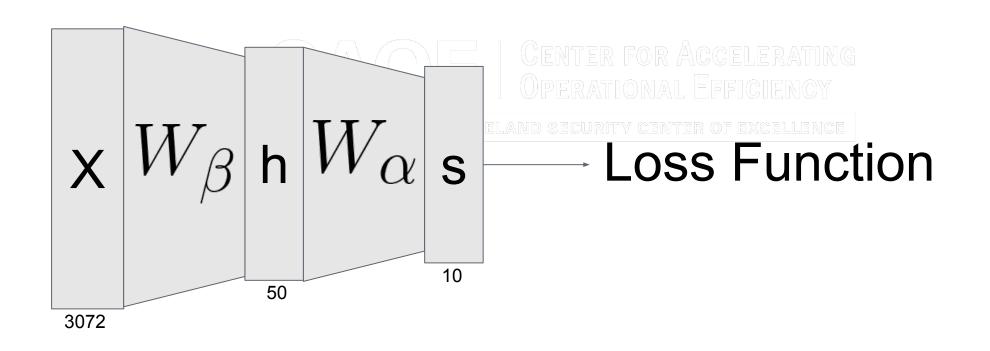

CENTER FOR ACCELERATING
OPERATIONAL EFFICIENCY

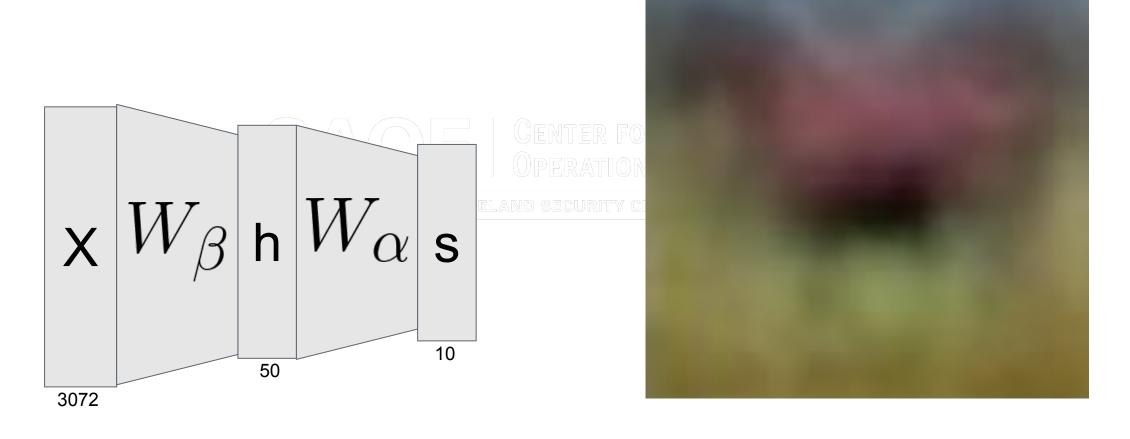

AND SECURITY CENTER OF EXCELLENCE

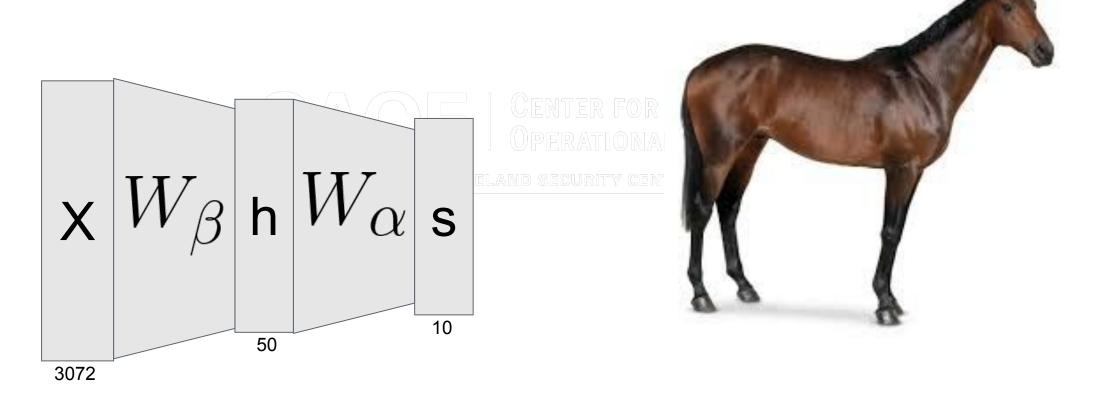

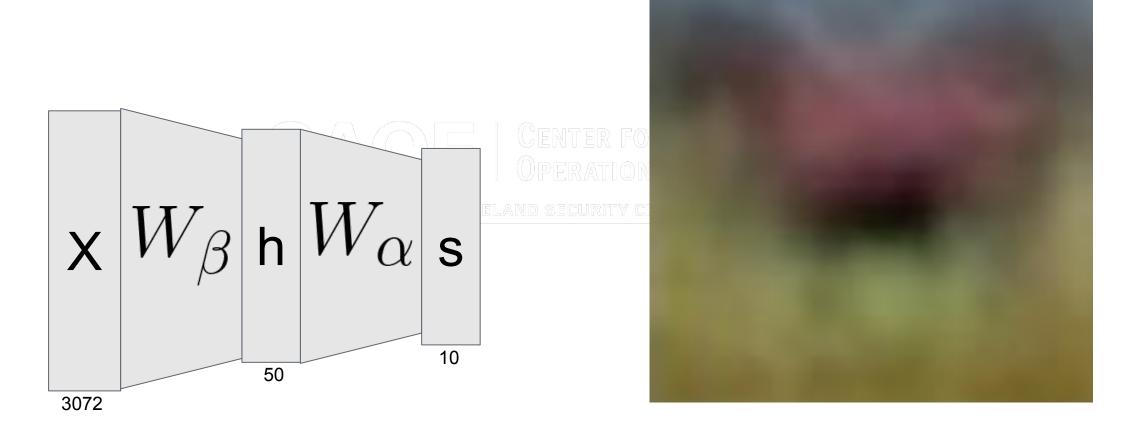

$$f = W_{\alpha} * max(0, W_{\beta} * X)$$

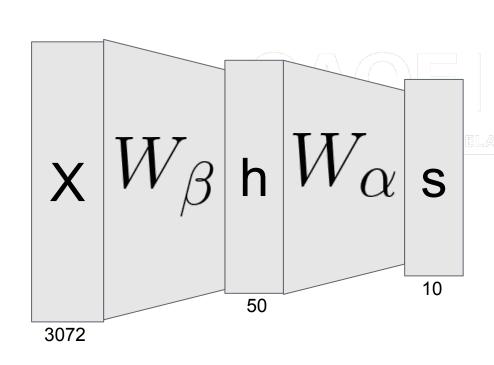

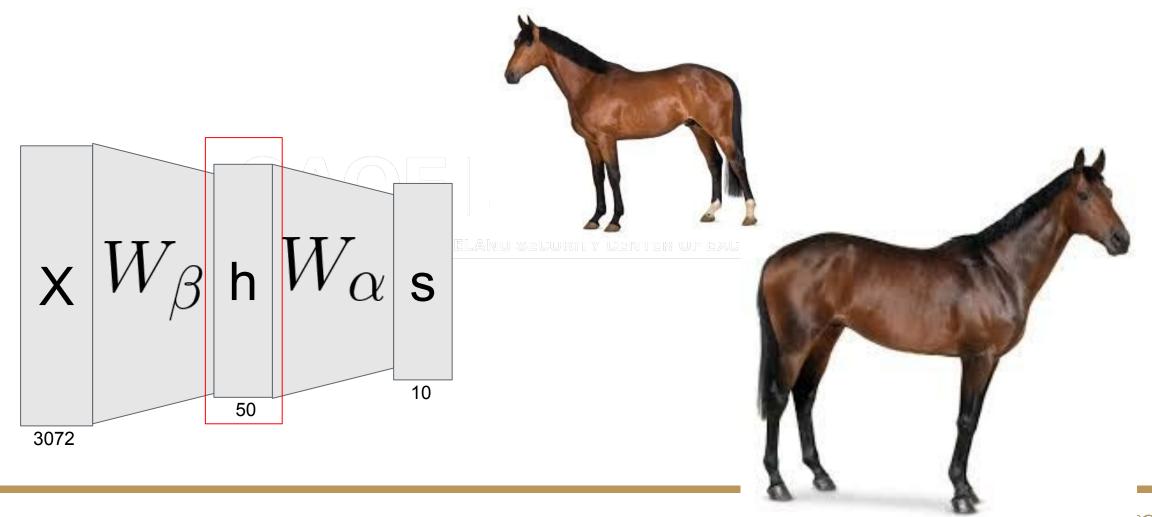

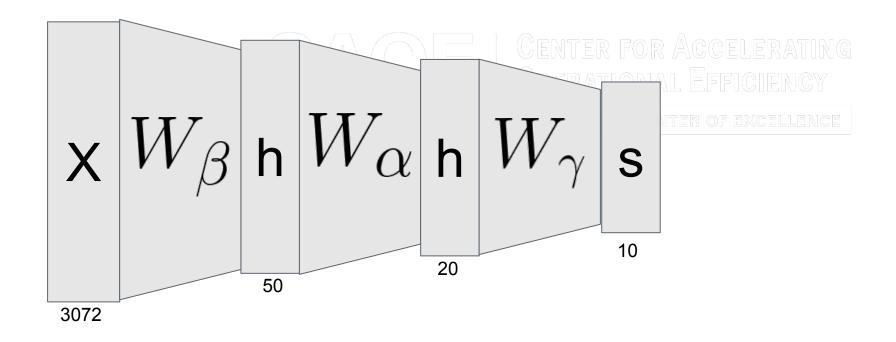

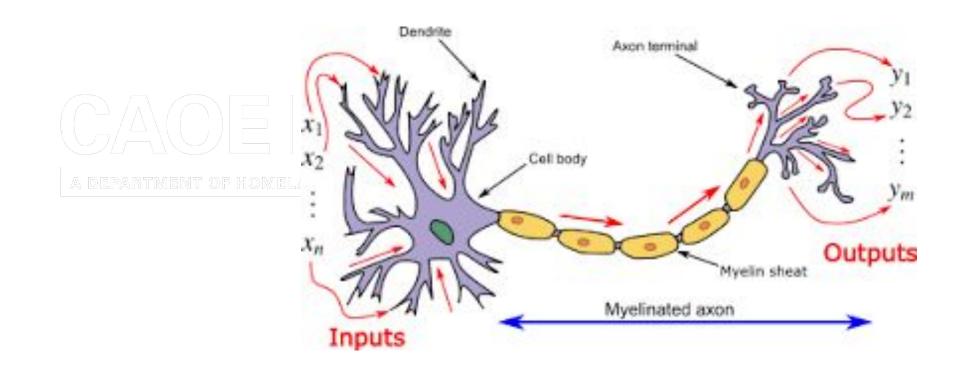

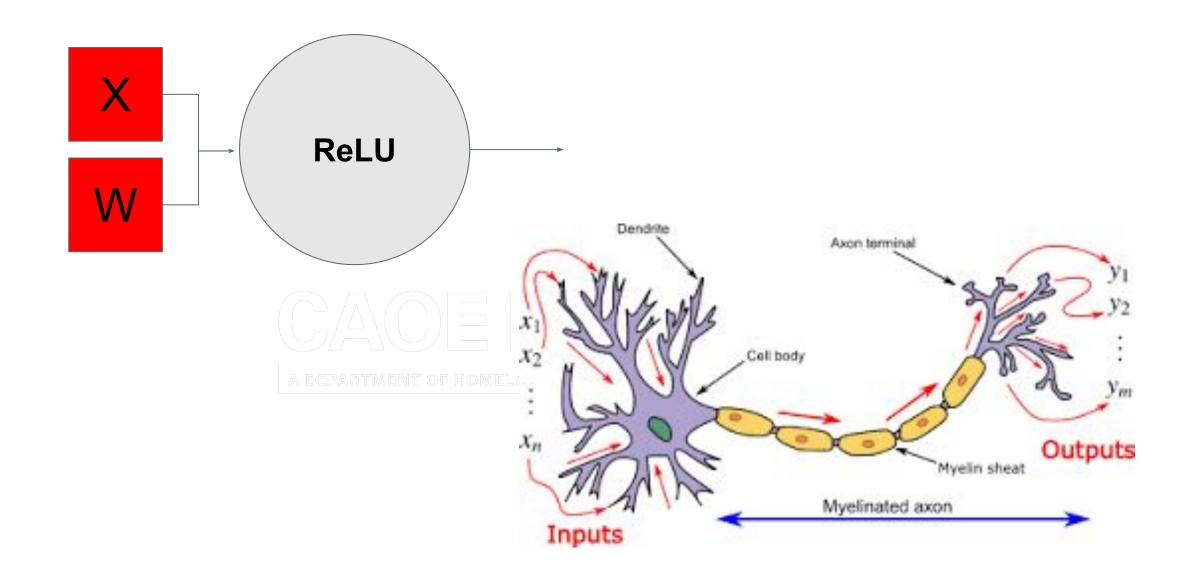

$$f = W_{\gamma} * max(0, W_{\alpha} * max(0, W_{\beta} * X))$$

Summary

Forward and Backward propagation in code

Strategies for abstracting and communicating network architecture (layers)

How computational graphs relate to neural networks

What "deep learning" actually means

How "deeper learning" can help when you have horses that face in different directions.

A bit on the biological inspiration of neural networks.
